TELVEX DIGITAL SOLUTIONS

Innovating Operations. Amplifying Communication.

Business Profile & Service Proposal
Date: **January 2026**

BUSINESS PROFILE

2026

Executive Summary

Telvex Digital Solutions is a Basotho-owned technology and media consultancy dedicated to accelerating the digital transformation of organisations in Lesotho.

We bridge **two critical pillars** of modern enterprise success: *operational efficiency* through intelligent software systems, and corporate trust through high-quality communication and media production.

Our approach is simple: businesses that **automate intelligently** operate faster, and businesses that *communicate clearly* earn trust. Telvex therefore provides `enterprise software`, **AI automation**, system integration, and data solutions — supported by professional broadcast-quality communication services for corporate visibility.

Rather than acting as a vendor, Telvex positions itself as a ***long-term strategic technology partner*** focused on `measurable business improvement`, risk reduction, and institutional credibility.

Our Name

The name **Telvex** is born from a simple mission: *to remove the complexity from technology*.

It is a fusion of two ideas:

"Tel" stands for our foundation rooted deep in Technology—the systems that solve real and painful business problems.

"Vex" represents the *challenges, the frustrations, and the vexing problems* that slow businesses down. In short, **we solve the vexing problems of Technology.**

At Telvex, we believe **technology should inspire, not irritate**. Whether we are building `AI-driven software` that automates the impossible or delivering high-end media production that captures the moment, our goal is the same: ***to take the "vex" out of tech***, so you can focus on **what matters most**.

About Telvex

Telvex Digital Solutions is a locally registered technology consultancy based in Maseru, Lesotho. The company was founded to close a growing gap within the market: many organisations require digital systems but lack access to locally available, dependable technical expertise.

We design, build and support practical digital systems — from internal business platforms and automation tools to AI-assisted customer services and corporate communication infrastructure.

Mission

To empower Basotho organisations with reliable, secure, and intelligent digital systems that improve efficiency, reduce operational burden, and enable confident decision-making.

Vision

To become Lesotho's most trusted partner for smart enterprise — where operations are data-driven, processes are automated, and organisations communicate with clarity and confidence.

Core Services

Enterprise Software & AI Solutions

This is the primary focus of Telvex. We design practical business systems tailored to real operational problems. Our goal is not merely to create software, but to remove inefficiencies.

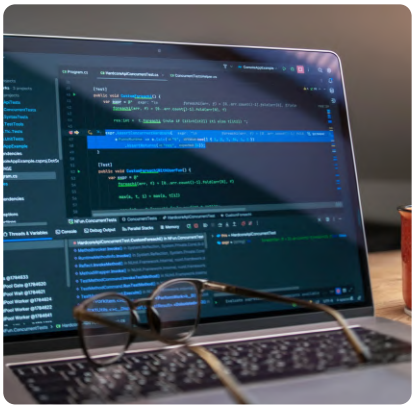
- Custom business applications (internal dashboards, management systems)
- AI-assisted workflow automation (document handling, classification)
- Customer service automation and multilingual chatbots (English & Sesotho)
- Digital forms and paperless processes
- Knowledge-base assistants for staff training

FinTech & Trading Automation

Algorithmic trading is offered as a specialized service. We develop automated financial systems for research, testing, and controlled deployment.

- Trading robot (Expert Advisor) development for MetaTrader
- Strategy automation and back-testing
- Risk-management logic and capital protection controls
- Financial data analysis tools and indicators

System Automation & Efficiency



Streamlining operations to reduce manual workload and error rates.

- Automated KYC document processing
- Data entry reduction scripts
- Automated report generation
- Scheduled database synchronization
- Internal workflow tracking systems

Corporate Multimedia

Professional audiovisual production services for organisations that require clear, reliable communication with stakeholders.

- Multi-camera live streaming (AGMs, conferences)
- Hybrid event broadcasting (physical + online platforms)
- Professional public address systems
- Executive presentation recording

Technical Expertise

Telvex follows structured deployment procedures to reduce operational risk, utilizing international-grade standards and tools.

Operating Systems

Linux, Windows, macOS

Languages

Python, JavaScript, TypeScript

Frameworks

Django, FastAPI, React, Next.js, TanStack Start

Databases

Convex, MongoDB, MySQL, SQL Server, PostgreSQL

DevOps & Security

Docker, CI/CD pipelines, Role-based access, Encrypted storage

Quality Assurance

Sandbox environments, Stress testing, Redundancy planning

Why Partner with Telvex

Local Availability

Direct accountability and presence in Maseru.

Fast Response

Quick support turnaround times for critical issues.

Strategic Partner

Long-term success focus rather than once-off sales.

Global Standards

International-grade technical security and quality.

Portfolio Highlights

We take pride in delivering impactful solutions across media production and software development. Here are some of our recent notable projects:

Media Productions

- **Live streaming and broadcast** of Graduations Ceremony of the National University of Lesotho (NUL)
- **Production of Saiwoo gamenight show** for 1 Freestate TV, for the whole of 2024 and 2025
- And many more corporate and institutional media productions

Software Solutions

- **AI powered online radio** for beezyfm.co.za, kelradio.co.ls and successfully implemented globalradiofarm.com
- **AI powered point of sale system** (posyx.telvex.net) for different businesses
- **AI powered student information system** (academix.telvex.net)
- And many trading robots for individual clients and businesses

Engagement & Pricing

Pricing is structured around project scope, complexity, and support requirements. Our goal is predictable cost, scalable engagement, and measurable value.

Project-Based

- Defined scope delivery
- Milestone payments
- Specific feature build
- Clear deliverables

Recommended

Monthly Retainer

- Ongoing system support
- Minor feature development
- Priority response
- Continuous monitoring

Support & Maintenance

- System monitoring
- Bug fixes
- Security updates
- Scheduled enhancements

** Detailed costing is provided after requirements assessment and Proof-of-Concept definition.*

Next Steps

Telvex proposes a Proof-of-Concept meeting to demonstrate applicable automation solutions and communication capabilities, and to identify practical areas within the Bank where immediate efficiency improvements can be achieved.
